US Annual \$100 Special Report July

DomPrep Survey

Evacuation Planning

Prepared by John Contestabile, Former Engineering & Emergency Services, Maryland Department of Transportation; Summarized by John F. Morton, DP40

DomPrep has surveyed the DomPrep40 and DomPrep Journal readers for their opinions on the nationwide progress of evacuation planning. In 2006, when the U.S. Department of Transportation (DOT) and U.S. Department of Homeland Security (DHS) evaluated and reviewed the Gulf Coast states' catastrophic-hurricane evacuation plans, they found a

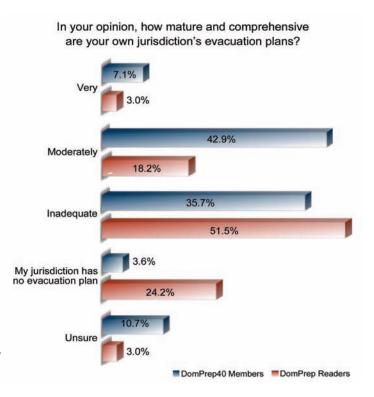

number of areas in need of improvement – in the multi-jurisdictional identification of weaknesses in specific plan elements, for example. We wondered: Is that still the case?

DomPrep40 member John Contestabile (pictured), the assistant program manager for homeland protection at the Johns Hopkins University's Applied Physics Lab, has been among those who want to find out and drafted this survey. As the former director for engineering and emergency services at the Maryland Department of Transportation, he has for many years had a vital professional as well as personal interest in getting the evacuation details right.

"Evacuation plans are an essential component of almost every major disaster," Contestabile pointed out as he prepared our survey. But "inevitably," he continued, citing numerous after-action reviews, "they seem to go badly." At all levels of response, and responsibility, the federal, state, and local jurisdictions of government are required to develop effective evacuation plans and to have those plans in place before, not after, disaster strikes. This is not an easy task, he acknowledged. A major evacuation "is a multi-jurisdictional/multi-agency drill." Also, because more grant funding has been allocated in recent years to interoperable communications "and to the acquisition of other 'gear' – not in itself a bad

thing, to be sure – one wonders ... how many jurisdictions are where they need to be on comprehensive evacuation planning."

Because so many hurricanes hit various areas of Florida each and every year, that state is one that seems to be reasonably proficient in planning for, and carrying out, major evacuations. "But," Contestabile has asked, "could this be more the result of practice than planning? And how many

The DomPrep40

The DomPrep40 is an interactive advisory board of insider practitioners and opinion leaders who have been asked to offer advice and recommendations on pertinent issues of the day. Focusing primarily on all-hazard preparedness as well as response and recovery operations, they will be challenged to provide quantifiable feedback that will be shared with the DomPrep audience.

Former Director, Engineering & Emergency Services, Maryland Department of Transportation

Craig DeAtley

Director for Institute for Public Health Emergency Readiness

Nancy Dragani

Former President, National Emergency Management Agency (NEMA), Executive Director, Ohio Emergency Management Agency other jurisdictions [throughout the country] can say they have that same level of experience needed to do evacuation planning properly?"

Key Findings: In general, DPJ readers were more skeptical of the progress of evacuation planning than were the DP40. Evacuation planning may be progressing in many states, but still seems oriented to vehicular paradigms. Nonetheless, it is somewhat surprising that transportation agencies are not more widely represented as lead agencies in the development of evacuation plans. Moreover, at least some state

Has your jurisdiction actually had to carry out an evacuation in the last five years?

Yes: 19.2%

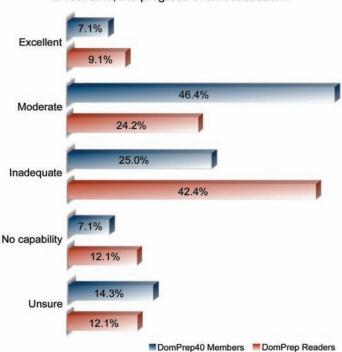

No: 69.2%

No: 81.3%

DomPrep40 Members

DomPrep Readers

How adequate is your jurisdiction's ability to monitor, in real time, the progress of an evacuation?

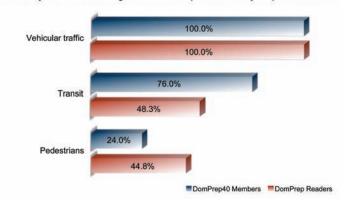

to "mature" by, among other things, expanding the "special categories" of likely evacuees that should be included in the plans – the state's (or community's) transit-dependent and prison populations, for example.

Following are the complete survey results:

plans may need

About half of the DP40 said that their jurisdictions have "very" or "moderately" mature and comprehensive plans, but over 35 percent say that those plans are "inadequate."

Robert Kadlec

Former Special Assistant to the President for Homeland Security and Senior Director for Biological Defense Policy

Neil Livingstone

Chairman & CEO, Executive Action

James Loy

Admiral USCG (Ret.), former Deputy Secretary, DHS

Adam McLaughlin

Preparedness Manager, Port Authority of NY & NJ (PATH)

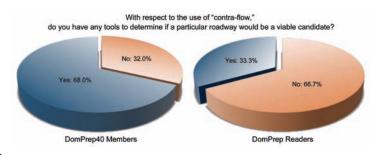

However, over half of DomPrep readers responding said their jurisdictions' plans were inadequate, and another quarter said their jurisdictions had no plans. The results between the two groups are significantly divergent, with readers harboring a greater skepticism.

Just under 70 percent of the DP40 said their jurisdictions have not conducted an evacuation in the last five years. Yet over 80 percent of DPJ readers replied in the negative, validating our initial assessment based on the DP40 results that actual evacuation ex-

perience is widely

lacking.

About half of the DP40 said their jurisdictions have an excellent or moderate real-time ability to monitor an

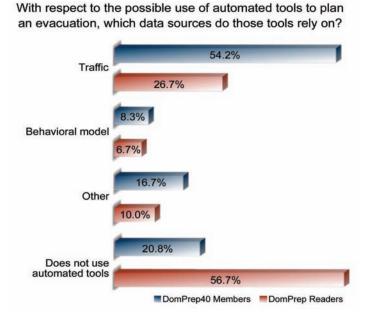

evacuation. But over half of DomPrep readers said their jurisdiction's monitoring ability is inadequate or non-existent. Again, the assessment from the field is more downbeat.

Perhaps not surprisingly, both groups felt plans addressed vehicular traffic well. They were less confident of plans for transit and pedestrians, although on this question readers were more positive than their colleagues in the DP40.

The DP40 and readers agreed on contra-flow. In both sets, just over two-thirds said their plans have the tools needed for determining candidate contra-flow roadways. This result validates our initial assessment that those jurisdictions whose contra-flow considerations should be updated and expanded can look to other jurisdictions to find working examples of the tools needed.

While four out of five DP40 members indicated their belief that their jurisdictions used automated tools to plan evacuations, more than half of DomPrep readers said their jurisdic-

tions do not use such tools. They differed also on the weight placed on traffic data sources. Only one in four readers said that was the case. For the DP40, it was over half. As for behavioral models. the low response in both groups seems to indicate that they might have been written off or simply not considered.

with transportation. Readers, on the other hand, at over 60 percent, said it was an EMA responsibility. Another significant divergence of opinion.

On sheltering for special-needs populations, here again, readers responded more negatively. Just over 42 percent of DomPrep readers said their plans do not provide for special-needs populations. Only 12 percent of DP40 members said their plans failed to provide for such populations. As for all categories of special-

needs populations, only a third of readers said they are covered, whereas for the DP40 it was fifty percent. For both groups, transitdependent and pet populations came up a little short, though – and prison populations were largely ignored, with just over 20 percent of readers and DP40 members saying that prison populations are included in their jurisdictions'

evacuation plans.
